ISSUES	PAGES	NEW	FIXED
⚠️ XML sitemap not found in robots.txt file	1	0	0

Issue description	How to fix
If your site has an XML sitemap and a robots.txt file, we recommend that you add a link to the sitemap file to the robots.txt file. This will help search engines understand where the sitemap is located.	Add a link to your XML sitemap file to the robots.txt file. To make sure search engines can index your XML sitemap file, view the sitemaps report in Google Search Console.

ISSUES	PAGES	NEW	FIXED
ⓘ Blocked by noindex	134	0	0

https://online.hafizmustafa.com/cdn-cgi/l/email-protection

Issue description	How to fix
The noindex directive in the <head> section of the page's HTML code prevents search engines from displaying the page in the search results. If the page uses the noindex directive, search engines will not rank the page, even if other websites link out to it.	Only use this directive on pages that you don't want to appear in the search results. Make sure these pages are not blocked by the robots.txt file. Otherwise, search engine bots will not be able to see the noindex directive, and if other websites link out to these pages, they can appear in the search results.

ISSUES	PAGES	NEW	FIXED
ⓘ Blocked by nofollow	132	0	0

https://online.hafizmustafa.com/cdn-cgi/l/email-protection

Issue description	How to fix
The nofollow attribute in the <head> section of the page's HTML code prevents search engines from clicking on all links on this page.	Use the nofollow attribute only if you do not want search engine bots to follow all the links on a specific web page. Make sure that pages that use the nofollow attribute are not blocked by the robots.txt file. Otherwise, search engine bots will not be able to see the nofollow attribute.

⧉ Duplicate Content

❌ 0   ⚠️ 1

ISSUES	PAGES	NEW	FIXED
⚠️ No WWW redirect	1	0	0

ISSUES	PAGES	NEW	FIXED

Issue description	How to fix
This check analyzes to see if you have set up a www to non-www redirect and vice versa on your website. Having your website load with and without www can lead to duplicate content issues.	If necessary, redirect all non-www URLs on your website to www.

∿ HTTP Status Code

⊗ 1974   ⚠ 739

ISSUES	PAGES	NEW	FIXED
ⓘ 3XX redirects in XML sitemap	1	0	0

https://online.hafizmustafa.com

Issue description	How to fix
The XML sitemap contains URLs that redirect visitors from one page to another via 3XX redirects, which, in turn, can drain the crawl budget and lead to website indexing issues.	Replace redirecting URLs in the XML sitemap with destination URLs. If a destination URL is already in the XML sitemap, you should delete URLs with 3XX redirects from the XML sitemap.

ISSUES	PAGES	NEW	FIXED
ⓘ 3XX HTTP status code	4	0	0

https://online.hafizmustafa.com/

Issue description	How to fix
The pages indicated in the report return a 3XX response code, meaning that a redirect is set up from such pages. The 3XX response code in itself is not a problem, but each redirect puts an additional load on the server, so it's better to remove unnecessary internal redirects.	Make sure that the number of 3XX pages on your website does not exceed 5% of the total number of pages. If their number exceeds 10%, then you have a critical problem, and you should immediately remove some of the redirects.

ISSUES	PAGES	NEW	FIXED
⊗ 4XX HTTP Status Codes	119	0	0

https://online.hafizmustafa.com/en/en/Iletisim

https://online.hafizmustafa.com/ko/karisik-baklava-metal-kutu-2000-gram-dhl-kargo-dahil

https://online.hafizmustafa.com/Arama?urunetiket=HM+1864+Premium+Kar%c4%b1%c5%9f%c4%b1k+Lokum+Karton

Issue description	How to fix
4XX HTTP status codes indicate that the requested page or resource cannot be accessed. 4XX URLs provide a poor user experience for the site's visitors because they cannot access the page or file via the link they clicked on. Moreover, internal links to 4XX URLs drain your crawl budget. Pages of your website that changed their response code to 4XX will be removed from search engine indexes.	Review the list of 4XX URLs and analyze every internal page that's linked to a 4XX URL. Remove such broken links or replace them with appropriate links to live and accessible pages. Moreover, you can set up 301 redirects when moving or deleting the site's pages to avoid having 4XX errors. The HTTP response code 429 (Too Many Requests) may indicate that the crawl rate specified under the crawl settings for your project is too high for the web server to handle. Decrease it via the settings (Limits and restrictions) and rescan the project.

ISSUES	PAGES	NEW	FIXED
⊗ Canonical URL with a 3XX Status Code	1	0	0

ISSUES	PAGES	NEW	FIXED

https://online.hafizmustafa.com/Default.aspx

Issue description	How to fix
A web page specified as canonical, returns a 3XX response code.	Analyze the list of canonical URL pages that point out to redirected pages. Replace canonical URLs containing redirects with 200 OK pages that you want to get indexed and be displayed in the SERPs.

⚠ Internal links to 3XX redirect pages	739	0	0

https://online.hafizmustafa.com/en

https://online.hafizmustafa.com/about

https://online.hafizmustafa.com/en/Magazalarimiz

Issue description	How to fix
Some internal links on your website point to pages whose URL has changed. Redirects allow both visitors and search engines to access the relevant page, but we still recommend you replace such links. In some cases, such links may cause the page to work incorrectly (for example, if the site was moved to HTTPS and internal links still use the HTTP protocol). Redirects also result in the loss of a small fraction of the link juice.	Replace all internal links indicated in the report with up-to-date page URL addresses.

ⓘ External links to 3XX	743	0	0

https://online.hafizmustafa.com/mini-delight-blue-box

Issue description	How to fix
Some pages that you link out to from your website redirect visitors to a completely different page. Perhaps, the redirect was set up after you linked out to the website, and now the link can lead visitors to another page that does not contain the information they need.	Manually look through every external 3XX link and make sure that redirected pages contain the necessary information. If there information is there, replace the link with the new version of the URL. If the required information is not available, replace or delete the link.

⊗ Hreflang to 3XX, 4XX or 5XX	8	0	0

https://online.hafizmustafa.com/en

https://online.hafizmustafa.com/ar

https://online.hafizmustafa.com/pistachio-baklava-assortment-xl-metal-box-dhl-shipping-included

Issue description	How to fix
The URL pointed to by the hreflang attribute is not found, unavailable due to server issues, or has a redirect. The URL of the hreflang attribute should return the 200 OK response code. If this is not the case, search engines may ignore the attribute or misinterpret it. As a result, search engines will not be able to find alternative versions of your pages and, accordingly, direct website visitors to their correct language or regional versions.	By clicking on the number of found pages, you will see URLs with 3XX, 4XX or 5XX response codes that hreflang attributes point to. Indicate pages with the 200 OK response code instead of these URLs.

ISSUES	PAGES	NEW	FIXED

ISSUES	PAGES	NEW	FIXED

https://online.hafizmustafa.com/ar

https://online.hafizmustafa.com/Baklava-Arabic

Issue description	How to fix
Duplicate <title> tags prevent search engines from understanding which site page is relevant to a particular search query. Pages with duplicate titles are much less likely to rank well.	Write a unique and concise title for each page of the site, adding the most relevant keywords to it.

⊗ Title tag missing	6	0	0

https://online.hafizmustafa.com/tr/ilke-ve-deger-en

https://online.hafizmustafa.com/ar/ilke-ve-deger-en

https://online.hafizmustafa.com/tr/misyon-vizyon-en

Issue description	How to fix
The <title> tag is empty or missing. Search engines will independently create a title using the available page content.	Analyze all of the pages with an empty or missing <title> tag and write a unique and concise title for each one, adding the most relevant keywords to it.

⚠ Title too long	3	0	0

https://online.hafizmustafa.com/-premium-pistachio-baklava-assortment-xl-metal-box-dhl-shipment-included

https://online.hafizmustafa.com/pistachio-walnut-baklava-assortment-xl-metal-box-dhl-shipping-included

https://online.hafizmustafa.com/padishah-baklava-assortment-xl-metal-box-dhl-shipment-included

Issue description	How to fix
Note that extensively long titles are cut off by search engines and can only be up to 600 pixels in length in the SERPs. For this reason, it's better to take this size into account when creating the title, otherwise people may see an incomplete title in the search results.	The general recommendation is to keep the title length between 20-65 characters with each word separated by a space, and concisely describe what the page is about.

⚠ Title too short	105	0	0

https://online.hafizmustafa.com/en

https://online.hafizmustafa.com/en/Magazalarimiz

https://online.hafizmustafa.com/Iletisim

Issue description	How to fix
A short title may not describe the content of your page in the best possible way. In such cases, search engines may even generate an improved page title for the SERPs by pulling data from your anchors, on-page text, or other sources.	The general recommendation is to keep the title length between 20-65 characters with each word separated by a space, plus make it useful, relevant, and representative of the page.

⌣ **Description**	⊗ 368	⚠ 10

https://online.hafizmustafa.com/en/Magazalarimiz

https://online.hafizmustafa.com/en/Iletisim

Issue description	How to fix
The description meta tag is missing. Search engines will use the available page content to generate a description for the page SERP snippet.	Add a unique description to each page of your website, so that both search engines and people are able to understand what your page is about.

ISSUES	PAGES	NEW	FIXED
⊗ Duplicate description	368	0	0

https://online.hafizmustafa.com/baklava-en

https://online.hafizmustafa.com/Glassware

https://online.hafizmustafa.com/drinks

Issue description	How to fix
Duplicate description meta tags were found on your website's pages. As a result, you may miss the opportunity to use more relevant keywords to describe each individual page.	Add a unique relevant description for each page of your website.

ISSUES	PAGES	NEW	FIXED
⚠ Description too long	1	0	0

https://online.hafizmustafa.com/ar-yurtdisi

Issue description	How to fix
Search engines can use the description meta tag to generate descriptions for snippets, but they may shorten it to a length they deem acceptable. For this reason, it's important that the page description is clear, concise, and defines the page's topic.	The general recommendation is to keep your page description length up to 158 characters, although Google can sometimes display longer snippets.

☑ Usability	⊗ 0	⚠ 0

ISSUES	PAGES	NEW	FIXED
ⓘ X (ex-Twitter) Card tag missing	116	0	0

https://online.hafizmustafa.com/en

ISSUES	PAGES	NEW	FIXED

Issue description	How to fix
Some pages of your website do not have the X Card tag. Without this tag, the page title, description, image, and so on won't be pulled up and displayed in your X posts along with the link. Instead, X will pull data from relevant Open Graph tags, if there are any.	*Use the X Card tag if you want the links to your pages that you share in your X feed to look attractive. Please note that URLs inside X cards must be absolute and utilize the http:// or https:// protocols.*

⇶ Website Speed   ⊗ 4   ⚠ 0

ISSUES	PAGES	NEW	FIXED
⊗ Slow page loading speed	4	0	0

https://online.hafizmustafa.com/pomenegrade-ottoman-kadayif-l-box

https://online.hafizmustafa.com/ko/fistikli-padisah-1900-gr

https://online.hafizmustafa.com/ar/dry-pistachio-baklava-2kg

Issue description	How to fix
Some pages on your website are not loading fast enough. As a result, this negatively impacts the page's behavioral signals: if a page is taking too long to load, people tend to leave the page and go to another website. Moreover, the loading speed of a web page is one of Google's ranking factors.	*Optimize the HTML code for the pages specified in the report. This is important because if the HTML code of the page isn't optimized, the page will take longer to load. Also consider checking your web server as it may be the root of the problem. If optimizing your code doesn't help, consider moving to a faster web server.*

📄 Textual Content   ⊗ 0   ⚠ 330

ISSUES	PAGES	NEW	FIXED
ⓘ Low word count	4	0	0

https://online.hafizmustafa.com/en/Magazalarimiz

Issue description	How to fix
Some pages on your site have less than 250 words. The optimal number of words depends on the type of page, but, as a rule, content should consist of more than 250 words.	*Make sure that the text on the page fully reveals its topic or describes in detail the products presented on the site.*

⚠ H1 tag missing	109	0	0

https://online.hafizmustafa.com/en

https://online.hafizmustafa.com/about

https://online.hafizmustafa.com/en/Magazalarimiz

Issue description	How to fix

ISSUES	PAGES	NEW	FIXED

The <h1> tag is the top-level page heading, which is the most important <h> tag. People usually see the <h1> tag as the title of the text, and search engines use it to understand what the page is about. Keep in mind that from the SEO perspective, the <h1> tag is the second most important tag after the <title> tag.

Make sure all of your web pages have a unique <h1> header tag. Depending on the website type and page structure, there may be more than one <h1> tag, but it is highly recommended to use only one <h1> tag per page. The key thing to keep in mind here is that your pages need to be logically structured.

⚠ H1 tag empty	3	0	0

https://online.hafizmustafa.com/deliveryterms

https://online.hafizmustafa.com/Sozlesme-Satis

https://online.hafizmustafa.com/ko/Sozlesme-Satis

Issue description

The <h1> tag is the top-level page heading, which is the most important <h> tag. People usually see the <h1> tag as the title of the text, and search engines use it to understand what the page is about. Keep in mind that from the SEO perspective, the <h1> tag is the second most important tag after the <title> tag.

How to fix

Make sure all of your web pages have a unique <h1> header tag that is filled with concise relevant text. Depending on the website type and page structure, there may be more than one <h1> tag, but the key thing to keep in mind here is that your pages need to be logically structured.

ⓘ Multiple H1 tags	8	0	0

https://online.hafizmustafa.com/deliveryterms

Issue description

Technically, you can use multiple <h1> tags on a page, and Google will consider both tags. But if the structure of the page allows you to use a single <h1> tag, we strongly recommend you do so.

How to fix

If possible, use a single <h1> tag on a page. That way, the structure of the page will be clear to all search engines.

⚠ Duplicate H1	218	0	0

https://online.hafizmustafa.com/teslimat-kosullari

https://online.hafizmustafa.com/ar/teslimat-kosullari

https://online.hafizmustafa.com/almond-chocolate-dragee-with-tiramisu-big-metal-box

Issue description

Duplicate <h1> headings on different pages prevent search engines from understanding which site page is relevant to a particular search query. Pages with duplicate header tags are less likely to rank well, as they can confuse search engines about the page topic.

How to fix

Write a unique <h1> for each page on your site, adding a clear description of the content on the page.

ⓘ Identical Title and H1 tags	355	0	0

https://online.hafizmustafa.com/-premium-pistachio-baklava-assortment-xl-metal-box-dhl-shipment-included

Issue description	How to fix
HTTP response compression is not enabled on your website. Compressing JavaScript files significantly reduces their size as well as the overall size of your web page, improving the page load time as a result. *Uncompressed JavaScript files make your web page load slower, which has a negative impact on the user experience and search engine rankings.*	*Configure server-side JavaScript compression.* *If you use uncompressed JavaScript files from an external resource, make sure that they do not slow down your page load time. Otherwise, contact the owner of the resource where the JavaScript files are stored with a request to configure compression.*

⚠ JavaScript too big	1	0	0

ISSUES	PAGES	NEW	FIXED

https://online.hafizmustafa.com/UyeOl

Issue description	How to fix
The total size of JavaScript files on some web pages exceeds 2 MB. The page loading speed depends on the size of JavaScript files, and the "heavier" these files are, the longer it will take for the page load. In turn, the page loading speed directly impacts the user experience, and as a result, SERP rankings.	Make sure that you're only using JavaScript files that are necessary for the correct operation of your web pages. Try reducing the file size.

⚠ JavaScript not minified	734	0	0

https://online.hafizmustafa.com/about

https://online.hafizmustafa.com/en/Magazalarimiz

https://online.hafizmustafa.com/baklava-en

Issue description	How to fix
Minification is the process of removing unnecessary lines, white space and comments from the source code. Minifying JavaScript files makes their size smaller, and as a result, decreases the page load time, providing a better user experience and improving your search engine rankings.	Minify your JavaScript files. If you use JavaScript files from external resources, contact the website owner and ask them to minify such files. If your JavaScript files aren't minified, but your pages load fast, you can simply ignore this issue.

https://online.hafizmustafa.com/en/Magazalarimiz

Issue description	How to fix
This section shows website pages whose text-to-HTML ratio is below 10%. This means that such pages are overloaded with code that may slow down its load time and complicate content processing.	To speed up page load time and reduce page size, shorten the HTML code. For example, you could remove all unnecessary comments, spaces, empty lines—in a word, remove everything that shouldn't be there and optimize the code structure.

⚠ Cumulative Layout Shift (CLS) in real-world conditions	1	0	0

Issue description	How to fix
CLS measures if there is any shift in page visual elements during its loading. It is measured in real-world conditions based on data from the Chromium browser.	Use size attributes for media files (images and video) to reserve space in the final layout rendering. Also, avoid injecting new content above what's already rendered and use CSS transform animations.

⚠ Total Blocking Time (TBT)	1	0	0

https://online.hafizmustafa.com/en

Issue description	How to fix
TBT measures the total blocking time during which a page is unavailable for user input (mouse, keyboard, or screen touch). It is measured in a lab environment based on data from the Lighthouse report.	Optimize the execution of long tasks. For example, you can break a large script into several smaller ones that load gradually. It's also worth minifying the code by removing unnecessary elements and dividing it into separate bundles.
